

GENSUITE INSIGHTS & ANALYTICS

Why Gensuite for Insights & Analytics

Gensuite Insights & Analytics software provides a combination of EHS data evaluation, mining and predictive analysis across all levels of an organization. Using this software, EHS and Operational leadership teams can focus on data-based leading indicators for performance, providing greater efficiency and focus in deploying resources.

Key Capabilities

- ① Consume analytics data on desktop or Mobile seamlessly
- ① Data mine, report and chart application data to derive insights; identify leading indicators and improvement opportunities
- ① Create and share interactive dashboards & reports through Tableau's intuitive interface
- ① Analyze data from single or multiple applications in a single chart with simple drag-and-drop functions for trend lines, statistical analysis and calculated values
- ① Communicate data using email alerts and automated subscriptions for a targeted audience on a set frequency
- ① Personalize data and layouts by user or organization scope
- ① View dashboards, cockpits and custom reports – developed based on subscriber-specific metrics and displays
- ① Complement your analytics with extension options including a dedicated data warehouse (DWH) to eliminate report constraints and expand ad-hoc reporting capabilities using a non-production data repository
- ① Receive support from Gensuite Data Science Team for building reports, troubleshooting and more

Business Case Study

Business Profile

A European-based agribusiness company with a global footprint and over 4,000 employees

Business Need

To establish a data warehouse, business-specific reporting capabilities and Tableau training

Gensuite Solution
